RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 64 pages. Original publisher: Gaithersburg, MD: U. S. Dept. of Commerce, National Institute of Standards and Technology, 2008 OCLC Number: (OCoLC)713533114 Subject: Information technology -- Security measures -- United States. Excerpt: . . . UIDELINES ON CTIVE ONTENT AND OBILE ODE G A C M C Figure 2-1. Basic Components of a Generic Browser To simplify browser development, software designs allow extensibility through a variety of techniques for communicating with other functional components. The motivation is twofold: no one can reasonably build in the means to render all forms of content, and to attempt to do so would limit innovation as well as the usefulness of the browser. As long as the browser design employs or provides a well-defined interface, other software producers can readily extend functionality with their components. In general, the program components of a browser, both built-in and otherwise, can be divided into the classes described below Mor98 . Components incorporated directly within the browser. Browsers contain a significant amount of built-in functionality and typically can inherently render a variety of content types, including text, HTML delimited text, scripting languages, Java applets, and common types of image files. The associated program components are functionally internal to the browser and able to interpret such content directly. To keep the browser safe from sources that have varying levels of trust, the program components must take precautions against arbitrary input received. Because these programs are contained within the browser, the browser manufacturer is able to impose security constraints on them. Built-in functionality is also a means for the manufacturer to distinguish its product from others in various ways such as offering proprietary extensions to standard script languages, close integration and interworking with other product offerings, and entirely new...
