Real-Time Collision Detection (Hardback)

By Christer Ericson

ELSEVIER SCIENCE TECHNOLOGY, United States, 2005. Hardback. Book Condition: New. 236 x 188 mm. Language: English . Brand New Book. Written by an expert in the game industry, Christer Ericson s new book is a comprehensive guide to the components of efficient real-time collision detection systems. The book provides the tools and know-how needed to implement industrial-strength collision detection for the highly detailed dynamic environments of applications such as 3D games, virtual reality applications, and physical simulators. Of the many topics covered, a key focus is on spatial and object partitioning through a wide variety of grids, trees, and sorting methods. The author also presents a large collection of intersection and distance tests for both simple and complex geometric shapes. Sections on vector and matrix algebra provide the background for advanced topics such as Voronoi regions, Minkowski sums, and linear and quadratic programming. Of utmost importance to programmers but rarely discussed in this much detail in other books are the chapters covering numerical and geometric robustness, both essential topics for collision detection systems. Also unique are the chapters discussing how graphics hardware can assist in collision detection computations and on advanced optimization for modern computer architectures. All in all, this...

Reviews

This publication is indeed gripping and interesting. It is rally exciting throug reading period of time. I am just happy to inform you that this is the very best publication i actually have go through during my individual existence and could be he finest pdf for ever.

-- **Miss Lela VonRueden**

The ebook is simple in go through better to fully grasp. It is actually rally exciting throug reading through period. It is extremely difficult to leave it before concluding, once you begin to read the book.
