One may even magnanimously neglect to point out that in some cases, for example, in the phylloxerans and probably the rotifers, the sex-determining event, as shown by differences in the size of the eggs, precedes the differential behavior of the chromosomes, and that the chromosomes are therefore not players, but pawns. It may be admitted that the experimental work of Baltzer, Gates, Lutz, Stomps, and others, has fixed upon the chromosomes the responsibility of producing certain hereditary features of the organisms they studied. Yet, after making all these admissions, it is possible to accept as demonstrated certain facts which plainly indicate an influence upon hereditary processes, of something else than chromosomes. It is my purpose first to point out a few of these facts: and...
